- Star 6 for Tramway

Dear Customers, Dear BühnenSpiegel Readers,

You are holding the **50th edition of our BühnenSpiegel**.

Since 1999, almost every year two issues have been published – with the aim of keeping you informed about the development of our companies, the diversity of our product range, our services, and our long-standing manufacturer partners.

In order to determine how the digital version will perform in comparison to the printed edition in the future, we are increasing the share of digital distribution and reducing paper mailings – though we will, of course, continue to provide printed copies upon request.

We look forward to receiving your feedback and orders.

The origins of Rothlehner and its work platforms date back to 1976. However, the decisive milestones were achieved shortly after German reunification.

Lift-Manager GmbH – Work Platform Service in Germany

The partnership established in 1991 between Manfred Rothlehner (Massing) and Roland Jäkel (Jänkendorf) gradually developed into a nationwide service company for aerial work platforms. Operating as **Lift-Manager GmbH**, it has since built a strong market position with a

comprehensive range of services.

Today, Lift-Manager employs more than 80 people and maintains a dense network of workshops and mobile service stations across Germany.

The service portfolio comprises - among others - repairs, maintenance, safety inspections, spare parts supply, and complete equipment overhauls.

The Jänkendorf workshop in particular has become established as a competence center for large-equipment overhauls (more about this on page 3).

Milestones in the early 1990s also included the founding of subsidiaries in the Czech Republic and Austria, followed later by operations in Poland and Slovakia.

A series of anniversaries was celebrated last year together with employees from Germany and abroad during a two-day event at the Western Park Pullman City in the Bavarian Forest.

We also maintain long-term partnerships with many of our suppliers and business partners.

Above all, we are proud of and deeply grateful for the numerous customer relationships that, in many cases, have lasted for decades.

As this year draws to a close, we wish you, your families, and your employees a pleasant Advent season and a Merry Christmas – along with happiness, good health, and success in the New Year 2026.

Lift-Manager GmbH

Center of Competence for Reconditioning of Large Scale Machines

With over 80 employees, Lift-Manager represents a nationwide network of workshops and mobile service for work platforms throughout Germany. The range of services includes - among others - repairs, maintenance, safety inspections, spare parts supply, and complete equipment reconditioning.

In particular, the workshop in **Jänkendorf** has established itself as a **center** of competence for large machine repair and refurbishment.

For rental companies such as **Zeilinga, Beyer, Boels, or Zeppelin**, Lift-Manager has already handled major projects.

Longer travel distances are gladly accepted for this purpose, as shown by the example of the **Norwegian** rental company **Drammen Liftutleie AS**.

The services at a glance:

- Complete overhauls and periodic inspections according to manufacturer specifications
- Mechanical refurbishment of booms, scissor systems and frames
- Professional welding and structural repairs
- Hydraulic, cylinder and hose repairs
- Engine and truck repairs
- Sandblasting, painting and visual refurbishment
- Spare parts supply and in-house transport logistics

Contact: Mr. Carol Buder
bc@lift-manager.de
 Tel. 0049 3588 254618

This enables Lift-Manager to offer complete large-equipment overhauls with exceptional scope and depth. **Customers benefit from decades of experience - also with big Bronto's -, professional equipment, and uncomplicated processing with a single point of contact for the entire process.**

News from the Lift-Manager branch in Viernheim

On **September 1, 2025**, the Lift-Manager branch in Bobstadt moved to a new company building in **68519 Viernheim**. The new Lift-Manager workshop in Viernheim has more than **600 m² of workshop space** with a **16-ton crane system**.

From there, up to three fully equipped service vans set out daily for on-site assignments at customer locations in the region.

Mobile assignments for the Viernheim branch will continue to be scheduled via the Lift-Manager headquarters in Massing.

EASYLIFT RA21

At Bauma 2025, **EASYLIFT** presented the new **RA21** with a working height of 20.40 m.

This very lightweight double-articulated crawler platform (2.860kg) offers a lateral reach of 10 m at full load capacity of 230 kg.

In addition to the **standard water-cooled Kubota diesel engine**, the **RA21** is also available as a **hybrid version** with **additional 48 V battery drive**. As an **option a winch (230 kg)** can also be ordered.

RA21 for Craftsmen and Rentals

The first **RA21** units have already been delivered to craftsmen, landscapers and rentals – such as here, to **Arbeitsbühnenverleih Vogel in Ehrenfriedersdorf, Erzgebirge**.

The **Höcherl family, who own the company**, are seen here testing the drives powered by 230 V and the diesel engine, as well as an additional **Easy Powerpack 3600**.

EASYLIFT RA31HY

at work in the Dinosaur Park Mitoseum

Our customer **Lausitzlift rental** recently used the **EASYLIFT RA31HY** at the **Dinosaur Park Mitoseum**.

The park's unusual architecture presented the **rental company** with a number of tricky challenges – perfect for demonstrating the strengths and flexibility of the **RA31 Hybrid** from **EASYLIFT**.

With a working height of over 30 m, an outreach of 14.50 m, hybrid drive (diesel & battery), intuitive operation, and standard radio remote control, the **RA31HY** is ideal for demanding rental applications thanks to its versatility.

New: GSR B240PX & B220PXE Compact on 3.5 t

GSR has expanded its bestseller **B240PX Comfort X** with an additional version featuring vehicle-width vertical outriggers – the **B240PX Compact**.

Also mounted on either a **Mercedes Sprinter** or **Iveco Daily**, the Compact version offers the same maximum lateral outreach of **12.30 m** with **80 kg**.

The new model's front outriggers remain within the vehicle's contours, yet it can still operate above the cab with adjusted outreach, allowing safe and efficient work even in confined spaces.

In addition to the **B240PX**, the **B220PXE**, with its innovative **flat basket linkage**, will also be available as a Compact version.

Delivered: GSR B220TJ on Atego All-Wheel Drive

A **GSR B220TJ Compact** on a **Mercedes-Benz Atego 823 AF 4x4** was recently delivered to the Hengersberg municipal market town.

This telescopic platform with jib is equipped with several special features, including **insulation up to 1000 V** and a **3.0 m long storage box**.

A large outrigger stroke and a

robust subframe come as standard on the B220TJ Compact.

Thanks to its highly off-road-capable chassis with all terrain tires, the platform can access job sites that remain out of reach for standard 3,5 t oder 7,5 t models.

Demo Tour:

GSR B270T on Mercedes Sprinter

This year, the new **B270T Comfort X** on **Mercedes Sprinter** was introduced.

The telescopic platform, with a **working height of 26.70 m**, features a completely new variable H-style outrigger system.

Its **five-section steel telescopic boom** is also newly developed, offering high rigidity for precise and comfortable operation.

The **B270T Comfort X** is currently on **demo tours** and available for **demonstrations** and **test operations**.

Experience it yourself!

DENKA•LIFT telescopic trailer platforms from 18 to 30 m

The lightweight and compact DENKA design with

DK18 (basket to the rear) – under 2,000 kg

The best-selling DENKA•LIFT with impressive parameters: 18 m working height, 11.3 m lateral outreach with 80 kg and 8.3 m with 200 kg basket load.

DK25 (basket to the rear) – under 2,500 kg

With its low weight and a passage width of only 1.62 m, this is a proven design for a wide range of applications up to a working height of 25 m.

DL30 (basket to the front) – under 3,500 kg

The flagship among trailer-mounted work platforms – the most cost-effective alternative for applications up to a working height of 30 m.

DL18 / DL21 and DL25 complete the range

Trailer platforms – used by some as all-round equipment and by others as niche equipment, they are also the favorites when it comes to low load-bearing capacities of floors and intermediate ceilings.

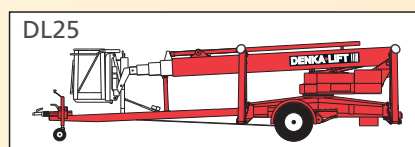

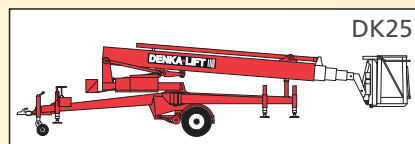

All these DENKA•LIFTs have a maximum lateral reach of over 11 m.

In addition to the standard battery drive, petrol or diesel engines are available as optional hybrid drives, as well as many other special equipment options.

DENKA•LIFT stands for:

Easy operation, serviceability, comfortable working thanks to the boom's high stability, and high value retention thanks to exceptional durability.

DENKA•LIFT
Made in Germany

Alexander Mika, Denis Brandscheid
from Dachservice Eichner with the new DK25

DK25 for Roofservice in Berlin

Another DK25 with top-of-the-range equipment and, as always, in the company's signature deep black color, was recently delivered to Olaf Eichner Dachservice GmbH.

The company has been working with DENKA•LIFTs since the 1990s, and they have proven themselves ideal for the roofing company's wide range of applications.

DENKA•LIFT DK18 assists in building climbing tower

The new sporting landmark of Gangkofen can be seen from afar along the federal road B388.

The DAV Gangkofen section has built a 15-metre-high, arch-shaped outdoor climbing tower on the sports grounds - entirely through voluntary work.

A DENKA•LIFT DK18 was used for the work, perfectly suited for this type of task.

Thanks to its impressive outreach, all mounting points of the professionally bolted climbing routes could be accessed from a single setup position.

Rothlehner wishes the climbers many enjoyable hours of climbing!

Haulotte HT43 RTJ Pro delivered to Austria

Rothlehner Austria recently delivered a Haulotte **HT43 RTJ Pro** to **Ponsold Dach GmbH**, based in Gleisdorf. With a working height of more than 42 meters and a horizontal outreach of 20 meters, this powerful boom lift becomes a flagship machine for demanding outdoor applications. The company specializes in hall and façade construction, flat roofs, and sheet metal work.

Among the Haulotte machines previously supplied to Ponsold are twelve **HT23 RTJ Pro** units, which have for years formed the reliable backbone of the company's access equipment fleet.

CEO Hannes Ponsold (left) with Service Manager Thomas Biedermann from Rothlehner / Villach.

Not only new Haulotte machines can often be delivered at short notice.

Used Haulotte platforms –

Various used Haulotte units of different models and years are available from stock.

Rothlehner and Haulotte – 25 years of strong partnership in sales and service!

EuropeLIFT

EuropeLift TM16GTi with diesel engine and wired remote control

Another recent delivery went to the rental company **Castell Arbeitsbühnen GmbH**.

The articulated telescopic lift EuropeLift **TM16GTi**, offering a working height of 15.70 meters, comes equipped with a **wired remote control** and a **water-cooled Kubota diesel engine**. Standard features include a "Home" function, the **EasyCom** remote maintenance system, and an additional 230 V mains drive.

New Workshop and Offices in Nitra / SK

The new company building in Nitra, Slovakia, is scheduled for completion in spring 2026.

This will provide ideal conditions to Rothlehner's further develop professional access platform services in Slovakia and to start assembling GSR truck-mounted platforms on site.

The Nitra team, currently consisting of 15 employees, is already looking forward to the conveniently located, significantly larger, and more representative premises. The new facilities will open up fresh perspectives for both service and sales.

Haulotte Star6 AE-E for Tramway Service

In Slovakia, two specially modified Haulotte Star6 AE-E units will soon be used for cleaning and maintenance work on trams.

The machines operate on 25-meter auxiliary rails positioned on both sides of the tram inside the service pit, moving only forwards and backwards to allow efficient access to all areas of the wagons, including the roof.
