Dear Customer, Dear Bühnenspiegel Reader,

Is it possible to be happy about success at the moment? At a time, when there is war at the door and the long period of peace in Europe has come to an end, the Corona virus is globally present and continuing to lead to high downtimes due to illness and quarantine, when supply chains are anything but stable, surplus demand cannot even be satisfied with fresh money, inflation and stagflation is leading to wage price spirals, equilibrium is increasingly difficult to find and indicators for a recession are gathering as never before?

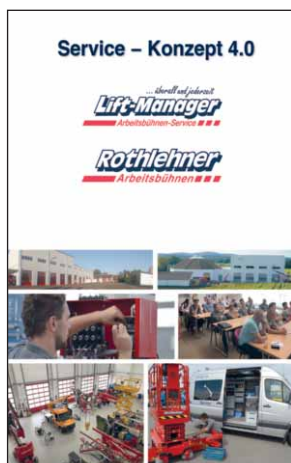

At least, it is difficult to simply derive the usual optimism from previous successes.

We were just as satisfied with the results of the previous year, as we are with the course of the current business year up until now. And we assume that again we will achieve our annual targets for 2022.

Two years of Corona restrictions have led to many, also disruptive, changes to business models. The digitalisation of different processes and communication paths have been accelerated enormously, and today sales structures have developed a hybrid character.

Nevertheless, in October, we will still take part in a classic fashion with our main suppliers at the world- largest specialist trade fair for construction machines, **bauma** in Munich.

bauma

At Rothlehner and Lift-Manager, we have also used this special two-year Corona time to intensively contemplate in our own future.

With **"Service 4.0"**, we have created a concept for developing the field of service for the new decade. At the forefront of this concept, our many services should be viewed as products which are marketed with a customer orientation, for example, individually adapted within the scope of service and maintenance contracts.

A further aspect concerns the development from a reactive to a proactive market cultivation with attractive offers which provide a high level of sustainable customer benefit.

Last but not least, the concept contains different approaches for process optimisation and for the digitalization of procedures which are already implemented in several projects in progress.

We are also working on **"VISION 2030"** for the strategic, long-term orientation of the corporate group.

This concerns a future-proof organisation which includes business and management structures as well as an organigram with sustainable management structures adapted for future requirements.

For this purpose, a management team is dealing with updating our corporate philosophy, values and long-term goals for optimising organisational and management structures. In the future, we will navigate transparently through responsibilities, interfaces, measures and task distribution using software support.

A broad involvement of the team is a matter of course in this process with the aim of achieving the greatest possible commitment of our employees for the benefit of our customers.

Concepts for the future Vision 2030

With many thanks and great appreciation for your trust. Be assured that we are here for you around the topic of work platforms - even in times of crisis!

**UNSERE
AUFBEREITUNGS-
PAKETE**
FÜR IHREN **DENKA•LIFT JUNIOR 12**

Refurbishment packages 1-7 for DENKA•LIFT Junior12

In 2018, the production of the Junior12 was stopped for technical and economic reasons.

However, many of our customers miss this machine type due to its specific product advantages, such as the extremely narrow design and a weight of less than 1 t.

Lift-Manager is now offering professional rejuvenation for Junior12 owners who have machines which are already a little older, but they still wish to use them for another 10 or 15 years.

You can select from different packages up to a complete renovation including re-painting, **6 months guarantee included!**

And we cover the transportation to the workshop carrying out the work for you!

As a result, you will increase the operating life and create sustainable return potential of the machine.

Beispiel-Pakete

PAKET 1

**DREHKRANZ / SCHWENKGETRIEBE /
ABSTÜTZUNG**

- ✓ Schwenkgetriebe mit Welle und Zahnrad erneuern
- ✓ Drehkranz mit Drehkranzschrauben erneuern
- ✓ Fußplatten mit Zubehör erneuern
- ✓ Stützbeinbuchsen und -bolzen erneuern
- ✓ Stützbeinzylinder Dichtsatz wechseln
- ✓ 24V/230V Kollektoren erneuern
- ✓ Kleinteile und Reinigungsmittel
- ✓ Hol- und Bringdienst

- ✓ Unterlegkeile und Dokubox erneuern
- ✓ Stützbeinabdeckungen erneuern
- ✓ Aufklebersatz erneuern
- ✓ Gerät überlackieren
- ✓ Kennzeichnung und Warnmarkierungen erneuern
- ✓ Kleinteile und Reinigungsmittel
- ✓ Hol- und Bringdienst

5.990,00 €

Haulotte training

For the start of the new season and in the meantime under face-to-face conditions without masks etc., extensive Haulotte training courses were carried out in spring at our main offices in Jänkendorf and Massing.

Holger Mack from **Haulotte** carried out the training on the machine technology of the new products **Star 6 AC**, **SIGMA 16 Pro**, **HAT 16 RTJ Pro** and **HS 18 LE Pro** over several days.

As a result, once again 15 service technicians from Germany and Austria were brought up to date on the latest Haulotte technology in order to professionally serve customers of Haulotte and Rothlehner.

At the end of the training, dinners and barbeque evenings were organised for the participants as joint events.

DENKA•LIFT NEWS
DENKA•LIFT

Three DENKA•LIFT DK18 for Hobrack

Ronald Hobrack, of the rental company of the same name in Großpostwitz near Bautzen, has once again recently renewed or extended his rental fleet with three DENKA•LIFTs DK18.

All three machines are equipped with the popular optional equipment "automatic levelling" and "permanently fixed LED lights".

Rothlehner and Lift-Manager would like to thank Ronald Hobrack (right in image) and wish him every success with these new **DK18 DENKA•LIFTs**.

GSR models on IVECO Daily 4x4

B160TJ Compact on Daily 4x4 – 7.0 t

Apart from the well-known road chassis, many GSR superstructures are also possible on the all-terrain **IVECO Daily 4x4**.

A wide range of different machine types are available with working heights between 16 and 24 m and total weights from 5.5 or 7.0 t.

The deployment spectrum is diverse:

Municipalities, utility companies, garden- and landscaping companies and

many other customer segments are increasingly using height access technology in demanding and inaccessible locations.

Especially the **B160TJ Compact on Daily 4x4** with its 3-stage, extremely short telescopic boom and vehicle-wide vertical outriggers with extremely high outrigger lift is predestined for use by utility companies in rough terrain, for example.

B200PX Compact on Daily 4x4 – 5.5 t

Many other elevating aerial work platforms by GSR can be mounted on the Daily 4x4. Telescopic and articulated telescopic superstructures with working heights from 18 to 24 m form a compact and all-terrain unit with this vehicle.

The **B200PX Compact** with its vehicle-wide outriggers and 300 kg basket load capacity is robustly designed; exactly right for daily, challenging operations.

Deliveries to municipalities

Once again, two individually equipped GSR aerial work platforms were recently handed over to municipal customers. Both models, the **B220TJ** with jib (left in image) and the **B220PXE** with its flat basket linkage (right in image) are mounted on a 5.5 t Sprinter chassis.

New optional equipment and accessories

A work platform can only fulfil its purpose 100% with the correct equipment. Recently, the range was extended to more than 70 items of available optional equipment. From A to Z, probably the most extensive accessory catalogue available in the market!

GSR – Bestseller for end customers and rental companies

B180T, bestseller from the T-series (B180T, B200T and B230T)

The **GSR B180T** Comfort X on MB Sprinter is currently the bestseller among the 3.5 t telescopic aerial work platforms.

The **B180T** provides 17.70 m working height, 300 kg basket load capacity and max. 12.70 m horizontal outreach. It can be variably stabilised either one-sided, wide or narrow using the H-outriggers at the front and vertical outriggers at the rear.

Even in the narrow, merely vehicle-width outrigger variant, the **B180T** still provides a sensible horizontal outreach and predestines this compact machine for narrow lanes and confined spatial conditions.

Besides the standard series equipment, the delivered machines also have "automatic levelling", a home function, an electrical socket in the basket and all-round side walls.

B220PXE, bestseller from the popular GSR PX series

The **B220PXE** Comfort is clearly in the fast-lane ranking of the PX model series with its unique flat basket linkage.

The PXE is perfect for working on roofs with its flush basket underside and the basket rotation range of 180°.

Many operations and deployments only become possible thanks to the typical up-and-over function of the double articulated telescopic model and its vast horizontal outreach of 11.20 m at 120 kg basket load.

The **GSR PX series** generally enjoys great popularity and has become the most-sold concept on 3.5 t – mainly mounted on Mercedes-Sprinter, but also on Isuzu and Iveco.

The **B220PXE** and the larger **B240PX** Comfort can both be stabilised narrow, in vehicle-width, or wide. The full 450° slewing range still remains available even if spatial conditions only permit narrow outriggers - at a reduced horizontal outreach.

Dear Reader,

We are pleased to announce that we are producing our aerial platform No. 9000 and we are proud that many of our machines are serving the German workers.

In fact, we have been passionately dedicating ourselves to meeting our customers' needs for many years.

With our proverbial flexibility we will be equally ready to satisfy all future needs.

As you know, the truck market is undergoing great evolution and we are following it closely.

Electric or hybrid trucks are entering the market and we will see quite soon the first platforms mounted on them.

We will be particularly focused on "energy efficiency" of our machines, to reach an effective sustainability.

Stay tuned!

We look forward to welcoming you to the upcoming Bauma 2022 in Munich

Italian – Excursion

VISITS TO EASYLIFT AND GSR

The Rothlehner team on an Italian excursion:

As a work platform dealer with more than 40 years of experience, we know how important the cooperation with our manufacturing partners is. Mutual visits therefore take place regularly. This was the case at the beginning of May when a delegation of the Rothlehner team visited the work platform manufacturers **GSR** (truck-mounted work platforms) and **EASYLIFT** (track-mounted crawler chassis work platforms).

Product training and meeting at **EASYLIFT**

Our sales team from Germany and Austria, as well as the workshop management from Massing took the trip. The first stop was at GSR in Rimini where we were able to gain first-hand insight into the current models and innovations.

The next day, the team continued to Brescello to EasyLift where we were instructed on the latest innovations and special equipment within the scope of product training courses.

Finally, such visits are possible again and they bring added value for both sides. Not only due to the obligatory meetings and training courses, but also these personal meetings contribute towards a long-term fair partnership based on trust. Problems in sales and service can also be discussed transparently and improvement suggestions and solutions are found.

Many thanks to the teams from **GSR** and **EASYLIFT** for their hospitality. We will be able to master the challenges of the future well in this way.

The Rothlehner team examines the **EASYLIFT** model RA24

Current truck-mounted work platforms are put through their paces on the premises of GSR in Rimini.

Employees of GSR and the delegation from Rothlehner

EASYLIFT - availability

A sound forward planning enables us to provide the entire range of **EASYLIFT** track-mounted spider lifts with an acceptable delivery time even at times when resources are scarce.

Also, quickly available on-stock machines are also ready for short-notice requirements.

EASYLIFT
EASYLIFT
EASYLIFT

EASYLIFT R420HY – demo machine arrived ...

The R420HY flagship of the EASYLIFT spider-lift range arrived in Massing just before going to print and will be available as a demo machine at least until **Bauma**.

... and pass on to the PartnerLIFT meeting

For the first demonstration date, we were invited to Ansbach to the **PartnerLIFT** regional meeting.

We took the flagship of our EASYLIFT crawler-mount range to the well-attended regional meeting which was excellently organised by their new partner **Blach Lift GmbH**.

The R420HY with 41.4m working height and a maximum outreach of 17 m scored well with the **PartnerLIFT**ers regarding manufacturing quality and performance data.

Also, some individual demonstration appointments were already arranged.

We would like to say thank you for the invitation to the meeting and for the high level of interest in our EASYLIFT spider lifts from 13 to almost 42 m.

Recently delivered

Recently, four EASYLIFT R130 were ready for delivery or collection.

R130 – the smallest model of the EASYLIFT crawler-mount range is particularly popular with painting companies and crafts businesses whose tasks take place at lower heights.

In many cases, we supply a "Vlemmix Model D" trailer with a total weight of 3,500 kg.

Recently, an EASYLIFT RA15 including Vlemmix trailer was delivered to **Malerbetrieb Maicher** (painter) in Vogtareuth near Rosenheim.

Dear Reader,

Since 2005, Easy Lift has been manufacturing spider lifts, successfully serving most European markets as well as the North American and Asian one, through a network of around 20 dealers, reaching an export ratio of 85% of its turnover.

At the end of 2020, Easy Lift started its cooperation with Rothlehner Arbeitsbühnen on the German and Austrian market. This cooperation has revealed really fruitful and in 2022 the partnership with Rothlehner Arbeitsbühnen has extended to the Polish and Czech market.

In May 2022 we had the pleasure to host some representatives of the technical and sale staff of Rothlehner Arbeitsbühnen for a 2 day theoretical and practical training. Recent improvements and new options could be looked at, like remote diagnostics, home function and crane winches. Also, the new RA24 model could be tested thoroughly.

Together with Rothlehner Arbeitsbühnen we will take part in the Bauma in Munich and exhibit many of our 17 model comprising portfolio.

We would like to thank Rothlehner for the trust and the extraordinary results obtained so far and invite all readers to visit Bauma 2022 in October!

Manuela Vender
Sales Director
Easy Lift S.r.l.

EuropeLift in Poland

EuropeLift trailer-mount platforms are already extremely popular in Poland.

Just prior to the time of going to print, our Polish team in Skawina / Krakow received orders for two new EuropeLifts.

One rental company from northern Poland decided on a **TM13G**.

This machine has a working height of 13.10 m and a maximum horizontal outreach of 6.10 m – at a basket load of maximum 220 kg.

The **TM13G** is characterised by a moveable jib which together with the rotatable work basket enables precise control in difficult to reach positions.

A **TM16GT** is going to an electrical company in West Poland. It is to be used there for electrical installations.

This machine provides a working height of 16.7 m and a maximum horizontal outreach of 8.10 m – at a basket load of maximum 220 kg across the entire working range.

The EuropeLift product range of trailer-mount platforms from 13 m to 18 m

EuropeLIFT

is characterised by an outstanding price / performance ratio, simple operation and practical functionality.

After 10 years of presence on the German-speaking market in the meantime, EuropeLifts have proven themselves in rental companies, with tradespeople and other end customers.

Furthermore, these trailers from Hungary are extremely successful with municipalities, authorities, THW (German federal disaster relief agency) and the military.
